

Risk 1 · Review co-generated with code

AI tool generates the change

Same toolchain reviews itself

conflict of interest

Defects shipped

Risk 2 · “Done” ≠ done

Model claims completion

Missing evidence / unverified items

no evidence chain

Gaps silently swallowed

Risk 3 · Results cannot be re-checked

Findings lack evidence binding

Zero findings treated as a pass

no artifact trail

No audit trail / not reproducible

Sego: explicit scope → constrained model review + deterministic evidence gate → structured artifacts → human decision (zero findings ≠ pass)
